PROFILE

Full Stack Developer specializing in **backend architecture**, **SQL optimization**, and **healthcare information systems**. Proven track record delivering **production-grade systems** at national scale -- reducing operational overhead, enforcing compliance, and improving data reliability across institutions.

EXPERIENCE

Computer Maintenance Technologist I

February 2026 - June 2026

Integrated Management Information System Section - Jose R. Reyes Memorial Medical Center

- Designed and deployed the **Patient Safety Incident Reporting System** end-to-end: **database architecture**, **secure authentication**, multi-patient case handling, and analytics dashboards -- reducing manual incident logging time and ensuring audit-ready records.
- Built the **Hospital Client Experience Survey System** deployed across all hospital services via **kiosk integration on internal IP** -- enabling real-time patient feedback capture with a centralized analytics dashboard.
- Engineered a full **Hospital Information System (HIS)**: **report generation**, template import, **body image annotation**, doctors' orders, and **role-based patient/bed/OR dashboards** -- consolidating clinical workflows into a single auditable platform.
- Implemented **rate-limiting and security hardening** across all systems; managed **full internal network deployment** -- delivering stable, access-controlled infrastructure under real hospital load.

Information System Analyst III

March 2025 - December 2025

Knowledge Management & Information Technology Services - Department of Health

- Architected **backend systems and optimized complex SQL queries** for **iHOMIS+ and PIDSR** -- national-scale EMR and disease surveillance platforms serving multiple regions.
- Led end-to-end restructuring of the **EMR reports module**: **PDF/Excel generation**, **RBAC**, and data validation -- bringing outputs into full DOH compliance and eliminating manual report errors.
- Built **patient search with encounter filtering** and **surveillance logic**; served as **secondary database administrator** with disaster recovery responsibilities for mission-critical health systems.
- Drove capability-building across DOH regional counterparts through **system training**, **SOP documentation**, and on-site/remote support -- ensuring sustainable long-term adoption.

System Developer (Intern)

June 2023 - August 2023

Information and Communications Technology Office - Bicol University

- Developed a **university inventory system** integrated with existing databases, streamlining asset tracking across departments.
- Conducted **UX research and feature analysis** for the iBU app, producing actionable recommendations adopted by the development team.

PROJECTS

Anime & Media Streaming Platform

TypeScript - Next.js - React

Full-stack media platform with **HLS video streaming**, **proxy-based adaptive playback**, multi-API aggregation, and **ISR caching** for performance at scale.

Pet eHealth Card

TypeScript - Next.js - Supabase

Health records app with **QR code and PDF export**, **Supabase auth and real-time DB**, Zustand state management, and Vercel production deployment with analytics.

Collaborative LLMs for Math Reasoning

Python - Docker - LangChain

Multi-agent **LLM system** using Ollama (Orca2 7B) and LangChain, packaged with **Docker** and exposed via a Streamlit interface.

Synomika: English-Filipino Translator

Python - JavaScript - HTML

Neural Machine Translation system for bidirectional English-Filipino translation, built collaboratively across a cross-functional team.

SKILLS

Languages

JavaScript - TypeScript - Python - PHP - C - C++ - C# - HTML - CSS

Frameworks

React - Next.js - Vue.js - Laravel - Codelgniter

Databases & Infra

SQL (optimization, admin, disaster recovery) - Supabase - Docker - Vercel

Tools

Git - Google Apps Script - REST APIs - RBAC - Rate Limiting - HLS Streaming

EDUCATION & CERTIFICATIONS

Bicol University

BS Computer Science - Aug 2020 - Jul 2024

Certifications

Generative AI, LinkedIn Learning (Aug 2024) - Intro to Image Generation, Google Cloud (Aug 2024) - Intro to Generative AI, Google Cloud (Aug 2024)
